## Important Safety Instructions

When installing and using this electrical equipment, basic safety precautions should always be followed, including the following:

### READ AND FOLLOW ALL INSTRUCTIONS

1. **WARNING:** To reduce the risk of injury, do not permit children to use this product unless they are closely supervised at all times.
2. **WARNING:** A wire connector is provided on this unit to connect a minimum 4.11 mm (No. 6 AWG) solid copper conductor between this unit and any metal equipment, metal enclosures of electrical equipment, metal water pipe, or conduit within 1.5m (5 feet) of the unit.
3. **DANGER RISK OF INJURY:** (For cord and plug connected units):
  - a. Replace damaged cord immediately
  - b. Do not bury cord
  - c. Connect to a grounded, grounding type receptacle only.
4. **WARNING:** (For permanently, fixed wired connected units): All installations must be protected by a Residual Current Device (RCD) having a rated residual operating current not exceeding 30 mA and a means for disconnection must be incorporated in the fixed wiring in accordance with all wiring rules.
5. **DANGER RISK OF ACCIDENTAL DROWNING:** Extreme caution must be exercised to prevent unauthorized access by children. To avoid accidents, ensure that they cannot use this spa unless they are supervised at all times. For additional protection, use a cover which is classified by the Underwriters Laboratories Meeting ASTM F1346-91 requirements. The cover supplied by the manufacturer meets these requirements.
6. **DANGER RISK OF INJURY:** If your spa is equipped with suction fittings, the suction fittings in this spa are sized to match the specific water flow created by the pump. Should the need arise to replace the suction fittings or the pump, be sure that the flow rates are compatible. Never operate spa if suction fittings are broken or missing. Never replace a suction fitting with one less than the flow rate marked on the original suction fitting.
7. **DANGER RISK OF ELECTRIC SHOCK:** Install at least 1.5m (5 feet) from all metal surfaces. As an alternative, a spa may be installed within 1.5m (5 feet) of metal surfaces if each metal surface is permanently connected by a minimum No. 4.11 mm (No. 6 AWG) solid copper conductor to the wire connector on the terminal box that is provided for this purpose.
8. **DANGER RISK OF ELECTRIC SHOCK:** Do not permit any electric appliance, such as light, telephone, radio, or television, within 1.5m (5 feet) of a spa.
9. **WARNING TO REDUCE THE RISK OF INJURY:**
  - a. The water in a spa should never exceed 40°C (104°F). Water temperatures between 38°C (100°F) and 40°C (104°F) are considered safe for a healthy adult. Lower water temperatures are recommended for your children and when spa use exceeds 10 minutes.
  - b. Since excessive water temperatures have high potential for fetal damage during the early months of pregnancy, pregnant or possibly pregnant women should limit spa water temperatures to 38°C (100°F).
  - c. Before entering spa, the user should measure the water temperature with an accurate thermometer since the tolerances of water temperature-regulating devices vary.
  - d. The use of alcohol, drugs, or medication before or during spa use may lead to unconsciousness with the possibility of drowning.
  - e. Persons suffering from obesity or with a medical history of heart disease, low or high blood pressure, circulatory system problems, or diabetes should consult a physician before using a spa.
  - f. Persons using medication should consult a physician before using a spa since some medication may induce drowsiness while other medication may affect heart rate, blood pressure, and circulation.
10. **WARNING:**
  - a. People with infectious diseases should not use a spa or hot tub.
  - b. To avoid injury, exercise care when entering or exiting a spa or hot tub.
  - c. Do not use a spa or hot tub immediately following strenuous exercise.
  - d. Prolonged immersion in a spa or hot tub may be injurious to your health.
11. **Caution:** Maintain water chemistry in accordance to manufacturer's instructions.

(Safety instructions continued on next page)

Your spa can be a source of great pleasure. It offers healthful stimulating recreation and is a delightful fun center for you, your family and friends. However, it contains large quantities of water and is deep enough to present inherent dangers to life and health unless the following safety rules are strictly observed.

12. **Never permit the spa to be used unless it is attended by at least one person other than the bather.**  
Someone should be present to lend assistance if the bather should be in trouble due to injuries, cramps, drowning especially in case of children, etc.
13. **Always use care in and around your spa.**  
The spa has many rigid, unyielding parts and many areas that become wet and slippery; these are all potentially dangerous when rough play is permitted or if care is not used particularly when entering or leaving the spa.
14. **Keep the water sanitary and healthful at all times.**  
Your filter system will remove suspended particles from the water. Regular application of spa chemicals in proper quantities will destroy harmful bacteria and prevent formation of algae. Your surface skimmer will remove insects, leaves, and other debris from the water surface. Unsanitary water is a serious health hazard.
15. **The water in your spa should NOT be warmer than 38°-40°C (100° - 104° F).**  
Always keep an accurate thermometer in the water because your spa's thermostat may be in error. Use a high quality, shatterproof thermometer with increments of one degree or less.  
The National Spa and Pool Institute consider a temperature of 38°C (100°F) safe and comfortable for a healthy adult. Most healthy adults can enjoy this water temperature for as long as desired, although it may raise the body temperature to the water temperature and eventually become uncomfortable (like a fever). At higher water temperatures the soaking time should be shorter; never soak for more than 20 minutes when the water temperature is 39°C (102°F) or higher. If you are planning a long rest in the spa, lower the water temperature closer to normal body temperature, about 37.2°C (99°F). Some people find even lower water temperatures relaxing and pleasing. Try different water temperatures in the 36.6°-39°C (98°-102°F) range until you find what temperatures suit you best.
16. **Hot water can raise the body temperature high enough to cause heat stroke.**  
This can be fatal even to healthy adults. If you have any questions about your own fitness or whether you should soak in the spa, check with your physician.
17. **Prolonged immersion in hot water may induce hyperthermia.**  
Hyperthermia occurs when internal body temperature reaches a level several degrees above the normal body temperature of 36.6°C (98.6°F). The symptoms of hyperthermia include: (1) dizziness, (2) fainting, (3) drowsiness, (4) lethargy, (5) increases in the internal body temperature. The effects of hyperthermia include: (1) unawareness of impending hazard, (2) failure to perceive heat, (3) failure to recognize the need to exit spa, (4) physical inability to exit spa, (5) unconsciousness resulting in danger of drowning.
18. **WARNING: The use of alcohol, drugs, or medication can greatly increase the risk of fatal hyperthermia in hot tubs or spas.**  
Despite the popular image of people in spas drinking wine or other alcoholic beverages, DO NOT use alcoholic beverages before or during spa use. Alcohol is a depressant which causes slowed reflexes and drowsiness, especially in conjunction with the relaxed soaking in hot water. This can lead to sleep or unconsciousness and possibly result in drowning. Using your spa with other people who are also drinking is not a preventative measure since they are likely to become similarly affected by the combinations of alcohol and hot water soaking.  
Soaking in hot water causes changes in the circulatory system, such as enlargement of blood vessels near the skin. Therefore, people with a medical history of heart disease, circulatory problems, and diabetes; high or low blood pressure should check with their physician before using spas. Additionally, people taking medications causing drowsiness, such as tranquilizers, narcotics, antihistamines, or anticoagulants should not use spas without asking their physician.
19. **Broken or missing drain covers must be replaced immediately.**  
Accidents can occur when long hair or a body part is trapped by suction from a drain or outlet whose cover is broken or removed. Children are particularly vulnerable, and they should be warned against danger.
20. **WARNING: Do not use electrical appliances in or around your spa. Do not use glass or other breakable items in or around your spa. Do not remove spa cabinet panels and attempt to make repairs. Do not attempt electrical repairs. Retain a certified licensed electrician.**
21. **This spa is for residential use only.** It is not intended for commercial use.

## SAVE THESE INSTRUCTIONS

## Selecting a location

### ☐ **WARNING! DO NOT STORE SPAS OUTDOORS WITHOUT PROPER WATER LEVEL.**

A spa stored outside in direct sun, without proper water level, uncovered or under a tarp/cover, can accumulated temperatures that will damage the spa, its components and void the warranty. Only store an empty spa indoors or in the shade.

### ☐ **Is permitting required for construction, electrical, or barriers?**

Most cities and counties require permits for exterior construction and electrical circuits. Some areas have codes requiring barriers such as fencing and/or self-closing gates on property to prevent unsupervised access to the property by children. Your local code enforcement department can provide information on which permits may be required and how to obtain them before delivery of your spa

### ☐ **Is the support surface adequate to support the weight of the spa?**

Provide a solid flat level load-bearing surface. The surface must provide a solid foundation with a minimum load bearing capacity of 784 kg per square meter (160 pounds per square foot). Concrete slabs and decks must be designed to support this weight.

**Warning!** Your spa is constructed of a very resilient and flexible polymeric material. It is designed to flex as much as 5cm (2 inches) without damage. However, overfilling the spa and/or installing on a non-level surface for extended periods of time can permanently distort the original shape of your spa, cause structural damage, effect the sealing of the cover and void your warranty.

### ☐ **Is the support surface impervious to water and adequate to handle water overflow?**

The surface must be suitable for a wet location and allow for adequate drainage for overflow water

### ☐ **Are there considerations for limiting access by children?**

Secure Your Spa. Plan for limiting access by children. Take precautions such as self-closing, locking gates, access doors, fencing and other child barriers, as dictated by the site.

### ☐ **Are there overhead electrical lines?**

Do not locate your spa under overhead power lines or in near proximity to existing buried or exposed electrical circuits.

### ☐ **Is there adequate room to access the service door, drain, filter and insulating cover removal?**

If you are installing your spa near a wall or with any type of structure on the outside, such as a gazebo, remember to allow access for service and insulating cover removal. If you are installing a Dream Maker cover lifter, see page 7 for additional detail.

### ☐ **Are there any privacy considerations?**

### ☐ **Are there electrical connection considerations?**

Your spa will be connected to electrical power by an electrician. You may want to consult your electrician before final positioning of your spa. Electrical connection information can be found on pages 15 and 16.

# CABANA CLEARANCES

# Spa Cover Installation

## WARNING! AVOID DROWNING RISK

- Failure to follow instructions may result in injury or drowning.
- Non-secured covers are a hazard.
- Keep children away. People or objects cannot be seen under the cover.
- Because of entrapment possibility, remove cover completely before entry of bathers.
- Excess weight can break the insulating foam, bend the steel reinforcement and damage the cover. Do not allow people or pets to stand or sit on the cover. Do not allow loads such as snow, leaves or anything else to accumulate on the cover. Do not use the cover as a table.

Caution, to avoid damage to the cover always remove the cover while adding chemicals to the spa water. This will prevent damaging chemical vapors from being trapped under the spa cover. These vapors can prematurely damage the cover material and void the warranty.

When properly installed, the cover supplied with your spa meets the Manual Safety Cover requirements of ASTM F1346-91.

If you are installing your spa near a wall or with any type of structure on the outside, such as a gazebo, remember to allow access for cover removal. If you are installing a Dream Maker cover lifter also, see the diagram below for spacing information and make sure to follow the instructions included with the lifter.

To deter entrapment by somebody slipping under the cover, ensure that all latches supplied with the cover are securely screwed to the cabinet, straps are inserted into the latches, the latches are locked, and the key is kept in a secure location.

Keep the spa covered when not in use to deter entry by unauthorized persons, reduce the loss of heat, and keep out rain and to keep foreign materials from settling in the water.

**Tools needed:** Power drill, #2 Phillips screw driver bit, measuring tape.

**Note:** For your cover lifter to operate properly, the spa must be a minimum of 24 inches (61cm) from the nearest wall.

2. Insert the thicker side of the one of BASE TUBES into the bottom of the spa at the location shown in Figure 2.
3. Place the OVAL BRACKET over the BASE TUBE and slide the OVAL BRACKET down to the spa. Using the drill with Phillips bit, attach the OVAL BRACKET to the spa, using two pan head screws, as shown in Figure 3.
4. First, rotate the BASE TUBE so that it is pointing to the closest end of the spa as shown in Figure 4. Next, insert the thinner end of the SUPPORT TUBE all the way into BASE Tube. Do not use screws yet.

Figure 2

Figure 3

Figure 4

(Spa cover installation continued next page.)

5. Repeat steps 2 through 4 on the side of your spa. Do not use screws yet.
6. Assembling the leftover tubing.
  - a. Insert the L TUBES into both ends of the CROSS TUBE. Do not use screws yet.
  - b. While the SUPPORT TUBES are oriented upward, push the open ends of the L TUBES over the SUPPORT TUBES, as show in Figure 5. Do not use screws yet.

*Note: in the following steps you will be connecting tubes together using the drill with the Phillips bit and the SELF-DRILLING screws. In each case you will spin the SELF-DRILLING screws through each of the pre-made holes in the outer tubes and cutting a hole in the inner tube. Once it has cut the hole in the inner tube, continue to spin the SELF-DRILLING screw until it is tight.*

- c. Ensure the SUPPORT TUBES are inserted all the way into the BASE TUBES. Now fasten the SUPPORT TUBES to the BASE TUBES with four SELF-DRILLING SCREWS.
- d. Next raise the cover lifter so that the CROSS TUBE rests 1 inch (2.5cm) behind the cover hinge seam, as shown in Figure 6.
- e. Center the CROSS TUBE and turn it so that the pre-made holes are up. Connect the L TUBES to the CROSS TUBE with six SELF-DRILLING SCREWS.
- f. Connect the L TUBES to the SUPPORT TUBES with six SELF-DRILLING SCREWS.

Figure 5

Figure 6

#### Follow these steps to properly install the cover.

1. Place the spa cover on top of the spa. Ensure the cover flaps and straps are not under the cover. Ensure the cover is properly seated in its final position.
2. Each strap is supplied with a cabinet latch snapped in place. Leave the cabinet latches at the end of the straps, but remove the bag containing the screws and while lightly pulling downward on a strap, mark the center bottom of the latch (fig 1). A piece of tape may be a good method to do this. Mark each remaining strap in the same way.
3. Remove the strap by pinching the two barbs of the strap as indicated (fig 2).
4. Hold the cabinet latch on the mark and using a Phillips screwdriver, drive three screws through the holes in the cabinet latch and into the outside of the spa (fig 3).
5. While the spa is not in use place the cover on top of the spa and snap all straps into the cabinet latches. To further protect against entry, lock each latch by quarter turning the key clockwise (fig 4). Store the key in a secure place.

Fig 1

Fig 2

Fig 3

Fig 4

#### How to use the cover lift

1. Fold half the cover onto the other half, toward the lifter as shown.

2. Holding the center strap on the lower cover half, lift up and out of the shell's cover recess.

3. Gently pull the cover outward. Allow the cover to hang as shown. To reinstall the cover, reverse these steps.

## Step Assembly

**Tools needed:** A screw gun or drill with a #2 Philips screwdriver bit.

**Items supplied:**

### Assembly steps:

1. Using a Philips screwdriver, remove the two flat head screws and cover from back of step.
2. Insert the rail into the two round holes. The long leg toward the back.
3. Feed the long leg through the top hole and guide into the bottom hole. Push downward through the plastic sleeve until the long leg hits the floor. Then, using the drill and Philips bit, drill the self-drilling screw through the plastic sleeve and through the rail until secure.
4. Reinstall the cover using the two flat head screws and screwdriver.
5. Place the top tread into place, ensuring the peg at the back of the tread, inserts into the corresponding hole. See page 7 for locating your step against the spa.

# Umbrella installation and use

## Important Safety Instructions

- **WARNING:** To reduce the risk of personal injury and damage to your umbrella, read and follow these safety, assembly, installation and operation instructions:
  - Do not install umbrella under electrical lines, electrical wires, electrical fans, electrical lighting fixtures or any other electrical fixtures.
  - Do not install this umbrella near any open flame. Never bring open flames near the umbrella.
  - Do not install this umbrella in any other base. It is intended to be installed only in the base supplied and only on the spa it was shipped with.
  - Do not install this umbrella indoors. This umbrella is for outdoor use only.
  - Do not open, close or adjust the umbrella while the spa is occupied or if person(s) or item(s) are close to the umbrella.
  - Exit the spa and remove the umbrella when inclement/severe weather, in any form including, but not limited to; rain, hail, sleet, snow and/or wind; nears.
  - Do not attempt to remove your umbrella while the canopy is in the open position.
  - Do not use any portion of this umbrella as a support.
  - Do not shake, lean or climb on this umbrella. Children must be supervised while near the umbrella.
  - Close the umbrella when not in use.
  - Always ensure the umbrella is secured to the base using the two knobs.
  - Use two people to safely assemble and install this product.
  - This product cannot be used for commercial use.
  - Do not leave the canopy open in the wind.
  - Do not leave open umbrella unattended.
  - Do not allow the umbrella to flap in the wind.
  - Do not modify or add anything to the umbrella.

## Save These Instructions

### Tools needed:

Screw gun or drill, with #2 Phillips screwdriver bit.

### Parts supplied:

## Assembling and installing the umbrella.

### Installing the Base

1. Ensuring the two knobs point away from the spa, insert the umbrella base into the hole in the top of the spa as shown and push the base downward until the bottom of the base rests on the floor.
2. Using a screw gun or drill, install the two self-drilling screws through the two holes and into the umbrella base, as shown.

### Installing the Canopy

3. Remove the umbrella frame from the box and lay on its side as shown.

Turn the crank handle counterclockwise to loosen the rope.

4. Gently pry off the bottom cap and pull the rope and rope stop out of the hub.

Untie the knot and remove the rope stop.

5. Pinch the two quick-release buttons and remove the entire cage assembly. Pull the rope out of the cage assembly. Remove the alignment cone.

6. Ensuring the canopy's top side is out, fit the center hole of the canopy over the top tube of the cage assembly.

Ensure the plastic caps are on each end of the cage arms and insert the four cage arms into the four corresponding corner pockets on the underside of the canopy.

7. Thread the rope back through the top tube, then alignment cone, then lower hub and through the small hole of the rope stop.

Tie and tighten a knot near the end of the rope as shown.

Pull the rope up until the rope stop is in the lower hub recess.

Push the end of the rope into the lower hub recess and press the bottom cap into place.

Lightly turn the crank clockwise until the cage begins to move.

8. With the umbrella frame still in the closed position and with the assistance of a second person, fit the pole of the umbrella frame into the umbrella base, already installed on the spa as shown. Secure the pole by turning the two knobs clockwise until tight.

9. The umbrella frame can now be opened by turning the crank clockwise. Sometimes the canopy support ribs can get stuck in a fold of the canopy's cloth. Make sure all four canopy support ribs are rising away from center. If not, stop and loosen the rib from whatever is holding it and then continue cranking.

### Cleaning and Care

- Clean surfaces with a damp cloth and mild detergent. Test on a hidden area to ensure the detergent will not harm the surface.
- Do not use abrasive cleaners.
- Do not use bleach.
- Make sure the umbrella is dry and clean prior to storing away for extended periods of time to prevent mold from developing.

## Filling Your Spa

**Warning!** Your spa is constructed of a very resilient and flexible polymeric material. It is designed to flex as much as 5cm (2 inches) without damage. However, overfilling the spa and/or installing on a non-level surface for extended periods of time can permanently distort the original shape of your spa, cause structural damage, effect the sealing of the cover and void your warranty.

Remove the access door (Fig 1A) and ensure the drain valve is closed and the cap is secure (Fig 2).

Place a garden hose into filter area (Fig 3) and fill the spa with cold (never warm or hot) water 15 to 20 cm (6 to 8 inches) below the top edge of the spa (Fig 2.1). If there is not enough water in your spa, the pump may suck air into the plumbing system thereby damaging the pump or heater, and void the warranty. Do not overfill, as the spa's water level will rise as each person enters the spa. Always keep the spa water level above the jet openings.

## Draining the spa

Draining your spa on a regular basis rids the spa of dissolved solids and protects your spa equipment from the effects of residual calcium hardness and total alkalinity problems. Depending upon usage, it may be as often as every three months.

To drain the spa follow these steps:

1. Turn power off to the spa.
1. Remove the access door (Fig 1A) and locate the drain valve (Fig 2).
2. Ensure that the drain valve is in the off position (as shown in Fig 2). Remove the cap (Fig 2) and attach a standard garden hose to the drain valve (Fig 4).

3. Route the garden hose to a sewer drain capable of safely assimilating 300 plus gallons (1135 liters) of water which may contain both unsanitary contaminants and chemical residue. Open the drain valve (as shown in Fig 4). The spa drains slowly.
4. The spa can only drain to the lowest jet. It may be necessary to manually remove the remaining water.
5. Before refilling your spa, ensure that the drain valve is in the off position and the cap is secured (Fig 2).

FOR THE ELECTRICIAN

Installations that do not adhere to these instructions can expose users to electric shock and will void the warranty.

Electrical connections must be made by a licensed certified electrician.

The power supply must be protected by an RCD having a rated residual operating current not exceeding 30 mA and a means for disconnection must be incorporated in the fixed wiring in accordance with all wiring rules.

## Power requirements

230 VAC, 1PH, 50HZ, 20/32 AMPS (see below)

3 WIRE (LINE, NEUTRAL, GROUND)

**The low amp rating is 16 amps (20 amp circuit).** The number 10 dip switch (see next page) is set to the “on” position. In this setting the heater will operate only while the circulation pump (low speed) is running. The heater will not run while the jet pump (high speed) is running. The low amp circuit may be needed where there is limited available power, as seen in some older homes. This means the water will begin to cool while using the jet pump. Many find this adequate due to their mild climate or shorter length of usage.

The high amp rating is 24 amps (32 amp circuit). The number 10 dip switch (see next page) is set to the “off” position. In this setting the heater will operate while the jet pump is running.

To make electrical connections, remove the access door as shown in Fig 5. Locate the control box, remove the cover and make connections.

# FOR THE ELECTRICIAN (continued)

## DIP SETTINGS 54509

MAIN POWER TO SYSTEM MUST BE TURNED OFF BEFORE ADJUSTING DIP SWITCHES

TEST MODE OFF	← 1	TEST MODE ON
POLL EVERY 30 MINS	2 →	POLL EVERY 90 MINS
DUPLEX PANEL	3 →	MINI PANEL
N/A MUST BE OFF	← 4	N/A MUST BE OFF
N/A MUST BE OFF	← 5	N/A MUST BE OFF
60HZ OPERATION	6 →	50HZ OPERATION
STD, ECON, SLEEP ALLOWED	7 →	STANDARD MODE ONLY
DEGREES FAHRENHEIT	8 →	DEGREES CELSIUS
N/A MUST BE OFF	← 9	N/A MUST BE OFF
HIGH AMP – HEAT W/P1 HI 24 AMP RATING (32 AMP CIRCUIT)	10 →	LOW AMP – NO HEAT W/P1 HI 16 AMP RATING (20 AMP CICUIT)

## System Operation

### Initial Start-Up

When your Spa is first activated, it will perform a self-diagnostics test showing a series of numbers followed by Pr, then by --along with the low speed pump for approximately 7 minutes total. Also, the internal clock that keeps track of the filtration cycles every 12 hours will start at that point. The system is preset to heat up to 100° F (37° C) and it is also preset to run on low speed for one hours (F1). If after the first 7 minutes water is not flowing from the jets you may need to purge the pump. Please see page 29.

### Temperature Adjustment

80° F-104° F (26°C-40° C)

The control's display will constantly show the spa's water temperature. To adjust the spa's water temperature, press or . The display will flash and show the current temperature setting. Each time either one of these buttons are pressed, the temperature setting will change by 1°. After you have set the desired temperature, stop pressing the buttons, the display will stop flashing after five seconds and the current spa temperature will show again.

### Jets

Press the to power the pump. The pump will sequence with each press of the as follows: low flow – high flow – off. If left running, the high flow pump will automatically turn off after 15 minutes (low flow in two hours).

### Adjustable LED Light

To turn the light on, press the button. Press again to turn it off. To adjust the color modes, press the button immediately after turning it off. The light will come back on in a new color mode. Each time you repeat this procedure, the light will cycle to a new color mode, as shown below. If left on, the light will automatically turn off after four hours.

- |   |                                      |
|---|--------------------------------------|
| 1. Color wheel. The light will slowly blend cycle through the colors. | 6. Light green.                      |
| 2. Aqua white.  | 7. Dark green.                       |
| 3. Light blue.  | 8. Red.                              |
| 4. Violet.  | 9. Step sequence through the colors. |
| 5. Dark blue.   | 10. Very slow color wheel.           |
|   | 11. Back to #1.                      |

### Spa Water Maintenance

This function enables you to program the amount of water filtration time.

Press or then to enter the programming mode.

Once in the programming mode press or to select the filtration time.

**F1** In this mode the water will be filtered for 1 hour every 12 hours.

**F2** In this mode the water will be filtered for 2 hours every 12 hours.

**F3** In this mode the water will be filtered for 3 hours every 12 hours.

**F4** In this mode the water will be filtered for 4 hours every 12 hours.

**F5** In this mode the water will be filtered for 5 hours every 12 hours.

**F6** In this mode the water will be filtered for 6 hours every 12 hours.

**F7** In this mode the water will be filtered for 7 hours every 12 hours.

**F8** In this mode the water will be filtered for 8 hours every 12 hours.

To exit press .

### Spa heating modes

Your spa is factory set to Standard Heating (ST) mode. This mode operates the heater whenever needed to maintain the programmed spa water temperature. (See Temperature Adjustment page 17).

### Advanced Optional Settings

You have the option to enable other heating modes as explained below: standard, economy and sleep. To enable these heating modes, you must do the following steps.

1. Turn off power to the spa.
2. Using a Philips screwdriver, remove the equipment access panel as shown.
3. Remove the control box cover by removing the two bottom screws, slide the cover up and then pull forward.
4. Slide dip switch 7 to the *off* position. See page 16 for reference.
5. Reinstall the control box cover and the equipment access door, before turning the power on.

These heating modes offer the ability to control your heater in one of three ways: standard, economy or sleep. Your spa is preset at the factory to Standard Mode. However, the Standard Heating Mode can be changed to Economy or Sleep by pressing then . With each pressing of then , the display will cycle through the three different modes described below. Note: by pressing then , you will not see the heating mode the spa is currently set to, but rather it will advance to the next mode. It is the last mode seen in the display that will be the new heating mode setting.

- **Standard Mode (St):** Your spa is preset to this mode. This mode operates the heater whenever needed to maintain the programmed spa water temperature. (See Temperature Adjustment page 17).
- **Economy Mode (Ec):** This mode operates the heater only during programmed Filtering Cycles (See Spa Water Filtration Settings above). This mode is ideal for areas that charge a premium for electricity during peak hours. This mode will maintain the thermostat setting. If it does not reach the thermostat setting, you may have to allow for more heating time by increasing the filtration cycles.
- **Sleep Mode (SL):** This mode works in the same manner as the Economy Mode except the thermostat setting is automatically lowered by 20 degrees. This mode is best suited for extended leaves from home when it is not important to maintain constant water temperature, such as vacations or business trips.

### Summer Set Temperature

In extremely hot weather, it is possible for water temperature to exceed the temperature setting. This is especially common when your temperature setting is lower than air temperature. If the water temperature exceeds the temperature setting more than 3°F (1.5°C), the pump will stop running automatically except during filter cycles. Normal operation will resume when the water temperature cools to below the setting, or the setting is increased above the water temperature.

### Display Messages

MESSAGE	MEANING	ACTION REQUIRED
	No message on display. Power has been cut off to the spa.	The control panel will be disabled until power returns. Spa settings will be preserved until next power up.
--	Temperature unknown.	After the pump has been running for one minute, the temperature will be displayed.
H H	Overheat -The spa has shut down. One of the sensors has detected 118°F (47°C) at the heater.	DO NOT ENTER THE WATER. Remove the spa cover and allow water to cool. Once the heater has cooled, reset by pushing any button. If spa does not reset, shut off the power to the spa and call your dealer or service organization.
O H	Overheat" -The spa has shut down. One of the sensors has detected that the spa water is 110°F (43°C).	DO NOT ENTER THE WATER. Remove the spa cover and allow water to cool. At 107°F (41°C), the spa should automatically reset. If spa does not reset, shut off the power to the spa and call your dealer or service organization
1 C	Ice -Potential freeze condition detected.	No action required. The pump will automatically activate regardless of spa status.
S A	Spa is shut down. The sensor that is plugged into the "A" jack is not working.	If the problem persists, contact your dealer or service organization. (May appear temporarily in an overheat situation and disappear when the heater cools.)
S b	Spa is shut down. The sensor that is plugged into the "B" jack is not working.	If the problem persists, contact your dealer or service organization. (May appear temporarily in an overheat situation and disappear when the heater cools.)
S n	Sensors are out of balance. If alternating with spa temperature, it may just be a temporary condition. If flashing by itself, spa is shut down.	If the problem persists, contact your dealer or service organization.
H L	A significant difference between temperature sensors has been detected. This could indicate a flow problem.	Check water level in spa. Refill if necessary. If the water level is okay, make sure the pumps have been primed. If problem persists, contact your dealer or service organization.
L F	Persistent low flow problems. (Displays on the fifth occurrence of "HL" message within 24 hours.) Heater is shut down, but other spa functions continue to run normally.	Follow action required for "HL" message. Heating capability of the spa will not reset automatically; you may press any button to reset.
dr	Possible inadequate water, poor flow, or air bubbles in the heater. Spa is shut down for 15 minutes.	Water level in spa. Refill if necessary. If water level is okay, make sure the pumps have been primed. Press any button to reset, or this message automatically will reset within 15 minutes. If problem persists, contact your dealer or service organization.
dY	Water detected in heater. (Displays on third occurrence of "DR" message.) Spa is shut down.	Follow action required for "dr" message. Spa will not automatically reset. Press any button to reset.

## SKIMMER FILTER CLEANING OR REPLACEMENT OF THE FILTER CARTRIDGE

The spa's automatic surface skimmer filter is designed to remove floating debris and contaminants, such as body lotions, by drawing water through a specially formulated filter cartridge element. It is critical that this element be routinely cleaned.

### To Clean or Replace the Filter Cartridge

1. Never operate the spa without the filter cartridge in place. It is difficult to remove the filter cartridge while the water is flowing. Also, there is a risk that debris may be drawn into the plumbing system, damage the pump and void the warranty. Disconnect the power.
2. Remove the end nut by turning it counter clockwise.
3. Pull the filter cartridge straight up and out of the skimmer filter.
4. At this point you can install a new filter cartridge and proceed to the next step. To clean the filter cartridge, take it to an area where the run off drains to a sewer drain capable of safely assimilating the water which may contain both unsanitary contaminants and chemical residue. Thoroughly rinse with the high pressure from a garden hose until the filter cartridge is free of dirt and debris.
5. Return the cartridge to the filter well by following steps 1- 4 in reverse order.

### Air Injection Venturi Adjustment

Air injection into the jet's water stream is adjusted by turning the venture dials. Each dial is independent and controls about half of the jets, respectively. Turn them counter-clockwise to increase, and clockwise to decrease, the amount of air injected into the jets' water stream.

### Adjustable Water Flow Jets

The jet's water flow is adjusted by turning the jet face. Each jet's flow is adjusted independently. Turn the jet face counter-clockwise to increase, and clockwise to decrease, the amount of water flow of each jet.

### Waterfall Flow Adjustment

Turn the dial counter-clockwise to increase, and clockwise to decrease, the amount of water flow of the waterfall.

## Using Your Cooler

To chill your favorite beverage, fill the cooler with ice and place beverages in the ice.

To drain the melt water from your cooler, turn the drain knob a couple of turns counterclockwise. Melt water will exit through the small hose located on the umbrella side, low by the lifter. This hose can be gently pulled out to help pour into a container. When done simply push the hose back into the cabinet until it hits the hose stop.

## Water Chemistry

Spa water chemistry (or water balance) affects the safety of your equipment as well as the appearance of your spa water. Water balance has five factors: pH, total alkalinity, calcium hardness, temperature and total dissolved solids. The pH is the most critical but total alkalinity and calcium hardness must also be watched closely. Low calcium hardness can lead to corrosion of equipment, while high calcium hardness can lead to scaling, cloudy water and staining. Water temperature should never exceed 40°C (104°F), and total dissolved solids should be kept below 1500 PPM.

Algicidal and sanitizing chemicals are either alkaline or acid. Sodium and calcium hypochlorites are alkaline. Chlorine gas and practically all other dry chlorine spa products are acid. On the market are a number of bromine sanitizers. Bromines are usually preferred since they don't emit a strong chlorine odor.

### SEE YOUR SPA WATER EXPERT FOR ADDITIONAL INFORMATION

#### Damage due to improper chemistry will void warranty

1. Check and adjust water conditions. You must maintain proper chemical balance to insure safe sanitary conditions and to prevent your spa from becoming a breeding place for bacteria. This is done by:
  - A. Test daily and maintain pH between 7.2 and 7.8. Adjust if necessary, above 7.8 use pH decrease, if below 7.2 use pH Increase. Improper pH can damage spa finish, equipment, cause eye irritation and chemical loss. Use dosage according to manufacturer's label.
  - B. Test alkalinity and maintain at 80 ppm to 140 ppm. Adjust if necessary, above 140 ppm use pH Decrease, if below 80 ppm use Total Alkalinity Control. Use dosage according to manufacturer's label.
  - C. Test daily and maintain proper sanitizer level. It's recommended to use bromine sanitizer and maintain bromine at 3.0  
5.0 ppm. Typically two or three bathers relaxing in an average spa with 39°C (103°F) temperature will consume all the bromine sanitizer in about twenty minutes. Therefore, prolonged or heavy use may require additional bromine to maintain safe sanitary conditions.
  - D. "Shock" (with a non-chlorine shock) once a week and after each water change. Do not use spa until the bromine residual has dropped to less than 5.0 ppm. NOTE: Improper pH will cause early corrosion to your pump. Corrosion is not handled under any warranty.

#### SPA MAINTENANCE SCHEDULE

##### DAILY

Test and maintain pH: Ideal range 7.2 - 7.8b.

Test and maintain bromine: Ideal range 3.0 - 5.0 ppm.

##### WEEKLY

Test and maintain alkalinity 80 - 140 ppm. Shock with a non-chlorine shock.

Add Spa Clear.

##### MAINTENANCE

Add defoamer as needed.

Inspect filter cartridge every 2 weeks and clean when needed.

## Water Chemistry (Continued)

It is recommended that the spa be drained regularly depending on its size, location and the frequency of use.

1. Clean filter and cartridge periodically according to manufacturer's instructions.
2. Keep the spa covered when not in use to reduce the loss of heat and to keep out leaves, dirt, and other foreign materials from settling in the water.
3. Since the water capacity of your spa is far less than that of a swimming pool, the chemical reaction caused by the presence of one or more persons in the spa is more rapid and pronounced. For these reasons, it is important to frequently check the bromine level, the pH level and total alkalinity of water then add the prescribed chemicals as necessary to maintain the proper chemical balances.
4. If questions or doubts arise regarding quantities and timing of chemical applications to your spa, contact your spa dealer who can assist you in prescribing the correct program for your spa.
5. Store all chemicals in a cool dry place and in such a manner as to prevent contact by children and pets.
6. When adding chemicals to your spa water, add to the center of the spa with the pump operating. Never add chemicals to unheated water as this will affect chemical action.

## Replacing the LED Light

1. Turn off power to the spa.
2. Using a Philips screwdriver, remove the panel behind the light.
3. Using your hand, dig through the insulation foam until you reach the light. Save the removed insulation.
4. Turn the white holder counter clockwise and remove (Fig 7.2).
5. Pull the LED light out of the light socket (Fig 7.3).
6. Install a new LED light, attach the white reflector turning clockwise, put the insulation back and reattach the panel with the screws.

## Headrest Installation

Your headrests are designed to not be removed. However, if you need to reinstall the headrest on the spa, follow these steps.

1. Using a Phillips screwdriver, remove the cabinet panel(s) directly behind the headrest location.
2. Locate the two wing nuts and completely remove them turning counterclockwise (fig 1).
3. Remove the two clear threaded fittings and insert their heads into the two outside holes in the back of the headrest (fig 2). Using a hair blow dryer, heating the plastic around the holes first, may help this step, but is not required.
4. Insert the two clear threaded fittings into the corresponding holes in the spa shell (fig 3).
5. Turn the wing nuts clockwise until they pull the headrests against the spa shell. Hand tight is sufficient.
6. Reinstall the panels.

## Freeze Protection

### DO NOT ALLOW THE SPA TO FREEZE

Caution, any damage caused by improper winterizing will void the warranty. You may want consider contacting a spa professional for winterizing service.

If the spa is to be stored or transported in temperatures of 0°C (32°F) or lower, it is critical that the unit be fully winterized.

To winterize the spa follow these steps:

- 1 The spa itself must be completely drained of water. See page 14 for draining instructions.
- 2 The drain valve must be in the open position and the cap removed.
- 3 Drain the pump by removing the pump wet-end drain plug (Fig 6.1). Leave this plug out until it is time to refill the spa. (Your pump model may vary.)

- 4 The filter cartridge must be removed, dried and stored. See page 20 for instructions for removing the filter cartridge.
- 5 The spa must be inverted (turned upside down) for at least five minutes to facilitate draining of the internal plumbing.

### CLEANING YOUR SPA

Do not use cleaners or compounds containing harsh abrasives. Also, avoid using heavy-duty rubbing or buffing compounds. Use a soft liquid cleaner.

### CARE OF VINYL HARD COVER

Vinyl coated fabrics are perhaps the most maintenance-free fabrics ever produced and certainly will provide exceptional service life if given the proper care. Almost all vinyl manufacturers now provide information concerning the necessary cleaning procedures for their products. In reality, all care maintenance instructions are the same for all coated fabrics regardless of their manufacturing origin.

Products are now on the market which are manufactured to enhance the beauty and service life of all vinyl. However, by using methods described below with minimal care and attention, you should enjoy years of satisfaction and pride with any vinyl coated fabric.

### EVERYDAY SOIL

A gentle mixture of any mild soap and warm water will generally dissipate most common soil from the surface. Using a soft cloth, wash the area to be cleaned and rinse. If stubborn dirt remains, as a stain embedded in the grain of the vinyl, use a soft brush, and if necessary, a touch of cleaning powder. In both situations, rinse and dry with a soft cloth.

## Frequently Asked Questions

1. **Why does my spa not shut off?** Your spa is designed to run from the time you plug it in, until it reaches your desired water temperature. Once desired water temperature is reached then you can control the functions with the buttons on the top control. For example: On the initial startup the spa will run for up to 18 hours to reach 38°C (100°F). At that point the spa will shut off, and then the spa will maintain your desired temperature settings. Keep in mind that anytime power is disrupted to the spa, the spa will reset itself and run until it reaches the spa's default settings.
2. **Why does my spa turn on late at night?** The spa is designed to filter every 12 hours. The clock starts the second you plug it in. Recommend unplugging and plugging back in between 7 and 8. This means the spa will come on every 12 hours at the designated time and filter the amount of time you have it set for.
3. **Why is my spa not heating?** Spas heat at approximately 0.8°C (1.5°F) or more per hour. If your water temperature is 21°C (70°F) when you first fill your spa it will take up to about 20 hours to reach 38°C (100°F). Remember, it is imperative to keep your safety cover on and the air injection dials turned off while heating.
4. **How many gallons does my spa hold?**

Model <small>First three characters on rating plate</small>	Cabana CS2
Liters	1189
Gallons	314

5. **I see water on the floor. What does this mean?** The cover can accumulate condensation between the seams and run down the sides of the spa. You can verify that water is coming from the cover by squeezing the seam, or by repositioning the cover so that the seam is on a different side. This only occurs when the temperature and humidity are at certain levels.

## PURGING THE PUMP

Sometimes after a water change (draining and refilling the spa), or initial start-up of the spa, there is no water flowing from the jets. You may hear the pump operating or even see the shaft of the pump motor turning, but have no water flowing from the jets. In addition to no flow out of the jets, you may even see an error message dr, dY, HH, OH, HL, or LF. All of these error messages can be caused by a lack of water flow. When this happens there is probably an air-lock in the pump. This air-lock must be purged from the plumbing for the pump to operate normally.

To purge the pump, please follow these steps:

1. Ensure the spa is filled 15 to 20 cm (6 to 8 inches) below the top of the spa.
2. Remove the service panel to expose the water pump. Fig 8.1

The pipes entering and leaving the pump are connected with large plastic unions. To purge the air from the pump, one of these unions will be slightly loosened.

3. Place a towel under the union to be loosened.
4. Using large pliers, slightly turn the union nut counterclockwise (Fig 8). This will produce a faint hissing sound of the trapped air escaping the pump. This will be followed by a small squirt of water which signals it is time to close the union by turning it back (clockwise). Do not over tighten the union. It is designed to be hand tight.

## Troubleshooting Guide

SITUATION	PROBABLE CAUSE	ACTION
NO HEAT OR HEAT TOO LOW	Operating while spa cover is open.	Ensure that spa cover is properly closed.
	Dirty filter	Replace or clean filter cartridge. Pg. 20
JETS WON'T COME ON	No power to spa control.	Check the RCD, circuit breaker and/or disconnect switch.
NO CONTROL DISPLAY OR FUNCTIONS	No power to spa control.	Check the RCD, circuit breaker and/or disconnect switch.
LOW WATER FLOW	Dirty filter.	Replace or clean filter cartridge. Pg. 20
	Low water level.	Make sure water level in spa is correct.
NO AIR BUBBLES IN JET	Air control valve in the closed position.	Open venturi dials. Pg. 21.
SPA IS LEAKING	Spa drain valve and cap partially open.	Ensure that drain valve and cap are fully closed. Pg. 14
NO SPA LIGHT	Burned out bulb.	Replace bulb. Pg. 25
SLOW WATER DRAIN	Drain valve not fully opened.	Ensure that the valve is fully open. Pg. 14
	Dirty filter.	Remove filter cartridge and clean. Pg20
	Kinked garden hose	Ensure drain hose is not kinked and is in a downhill direction.
NO WATER FLOW FROM JETS	Air lock in pump	Purge the pump. Pg. 29

## Glossary of Terms

### **Venturi dials**

Mounted on the lip of the spa or at the equipment shroud, to induce air to the jets.

### **BYPASS CHECK VALVE**

Prevents water flow stoppage due to dirty filter.

### **CONTROL BOX**

Basically the brain of the spa. Power is distributed to all functions of the spa, pumps, lights, heat, etc.

### **DRAIN VALVE**

Used in the draining of the spa, looks like an outdoor faucet and fits a standard garden hose.

### **FILTER**

The filter cleans the spa and removes particles and debris and protects the equipment from foreign substances.

### **FOOTWELL**

The bottom of a spa where you place your feet.

### **RCD**

RCD is an abbreviation for a residual-current device. This device quickly disconnects current to prevent serious harm from an electric shock.

**HEATER** The thermostatically controlled heater raises the temperature of the water to the desired degree. This is located under the control box in the equipment area.

### **JETS**

The fittings on your spa that direct the flow of water for massaging action.

### **pH**

Stands for "Potential for Hydrogen" This is the term used to describe the acid (low pH) or alkalinity (high pH) condition of the water. The ideal pH for spa water is 7.5.

**SKIMMER** The skimmer removes surface debris to the filter. The water level in the spa should be kept at the proper range for optimum skimmer operation.

### **TOP CONTROL PANEL**

Mounted on the lip of the spa. The digital panel that controls the spas functions.

## Your Spa's Ozonator. (Optional equipment)

If you ordered your spa with the optional ozonator installed, you can confirm this by viewing the spa's rating plate. The rating plate is located near the floor and equipment access door. As shown below, look in the option box to confirm the ozonator has been installed. The word "OZONE" will be seen.

Further to verifying the ozone option is installed on your spa. If you look in the equipment compartment you will see a small black or blue box, about 6.6cm x 8.4cm x 3.3cm (2.6 inches by 3.3 inches x 1.3 inches). It will be either strapped to the plumbing or mounted on a wall, as shown below.

Ozone is an oxidizer used to sanitize water and air. Ozone is created naturally in the environment during thunderstorms. The electric charge created by lightning converts the oxygen in the air into ozone. Your ozonator creates ozone using the same principle. It utilizes a very high electric charge to convert oxygen into ozone. This ozone is then injected into the spa's water stream and eventually through two of the spa's jets. These jets will always produce air bubbles (however fine they may be) while the pump is operating and are not controlled by the air injector venturi dials.

The oxygen in the air is normally O<sub>2</sub>. That is a molecule consisting of two atoms of oxygen. When exposed to a high electrical charge, a 3<sup>rd</sup> oxygen atom is added to some of the O<sub>2</sub>, forming O<sub>3</sub> (ozone). The weak bond holding the third oxygen atom causes the molecule to be unstable. An oxidation reaction occurs upon any collision between an ozone molecule and a molecule of a substance that can be oxidized, i.e. bacteria, fungi, mould, yeast, viruses, and forms of metals. The weak bond 3<sup>rd</sup> oxygen atom splits off to these substances, leaving oxygen (O<sub>2</sub>) as a by-product. During this oxidation reaction, organic molecules are changed and dissolved metals are made no longer soluble.

Although ozone is more effective than chlorine, chloramines and chlorine dioxide for inactivation of viruses, Cryptosporidium and Giardia; it dissipates very quickly. For this reason ozone can only be used as a secondary sanitizer, to enhance the primary sanitizer used to keep your spa safe. You must use a primary source of sanitizer which is always present in the spa water. Please see the Water Chemistry section of the spa owner's manual for further information about sanitizers.
